## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-13 are allowed.
2. The following is an examiner's statement of reasons for allowance: regarding independent claims 1 and 2, the prior art does not disclose nor suggest an alarm unit for sensing power voltage with two separate voltage evaluation circuits wherein each particular voltage evaluation circuit has specific detection characteristics whereby the first voltage evaluation circuit will output an accident state signal when the measured voltage is less than a first voltage, the first voltage evaluation circuit only being operable when the measured voltage is higher than a second voltage which is less than the first voltage; and the second evaluation circuit outputting an accident state signal when the measured voltage is below the second voltage.

While many patents exist that have multiple evaluation circuits, none disclose nor teach the claimed evaluation circuit only being operable above a predetermined measured voltage value.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
